

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A method for conditional displaying of an electronic message comprising at least one display condition for the message in a portable electronic device, ~~characterized by the steps of the method comprising:~~

receiving in the portable electronic device the message from an external device;
determining in the portable electronic device the geographical position of the portable electronic device;

determining in the portable electronic device whether the geographical position fulfills a geographical display condition of the message; and

displaying the message in the portable electronic device if the at least one display condition is fulfilled.

2. (Currently Amended) The method according to claim 1, ~~wherein the step of~~ determining whether the geographical position fulfills the geographical display condition comprises determining whether the portable electronic device is located within a geographical area specified by the geographical display condition.

3. (Currently Amended) The method according to claim 1, ~~wherein the step of~~ determining whether the geographical position fulfills the display condition comprises determining whether the portable electronic device is located within a certain distance specified

by the geographical display condition from the location of another electronic device, which has transmitted the message.

4. (Currently Amended) The method according to claim 1, further comprising ~~the step~~ of determining whether a time limit of a time display condition for indicating a final display time of the message has lapsed, wherein the ~~step of~~ displaying is executed if said time limit has not lapsed when the geographical display condition is fulfilled.

5. (Currently Amended) A method for sending forming an electronic message in an electronic device, the method comprising: ~~the step of entering said message, characterized by the steps of~~

~~entering at least one display condition, which is intended for a recipient of the message, comprising a geographical display condition for conditional displaying of the message;~~
~~entering display conditions set by a transmitting user for conditional display of the electronic message, the conditional display conditions comprising:~~
~~a geographical area in which the electronic device should be located when the electronic message is displayed in a recipient electronic device, and~~
~~another geographical area in which the recipient electronic device should be located when the electronic message is displayed in the recipient electronic device;~~
appending said display conditions condition to said electronic message; [[and]]
entering a receiver address to which the electronic message should be sent;
sending the electronic message to a service node;

storing the electronic message in the service node until the electronic device is within the entered geographical area and the recipient electronic device is within the entered geographical area; and

forwarding the electronic message to the recipient electronic device when the electronic device is within the entered geographical area and the recipient electronic device is within the entered geographical area.

6. (Canceled)

7. (Canceled)

8. (Currently Amended) The method according to claim 5, wherein the step of entering the display conditions condition further comprises: the step of

entering a certain distance with regard to a specific the geographical area, within which a portable the recipient electronic device, to which the message should be forwarded and which is the recipient, should be located when the electronic message is displayed.

9. (Currently Amended) A portable electronic device for displaying an electronic message having at least one display condition for conditional displaying of the message, comprising display means for displaying the electronic message, the portable electronic device comprising:

receiving means for receiving the message from an external device;

position determination means for determining the geographical position of the portable electronic device; and

determining means for determining whether the geographical position fulfills a geographical display condition of the message.

10. (Previously Presented) The device according to claim 9, further comprising a message interface adapted to display the electronic message if the geographical position fulfills the geographical display condition

11. (Currently Amended) The device according to claim 9, wherein the determining means is adapted to, in operation, determine whether the portable electronic device is within a geographical area specified in the geographical display condition or within a certain distance therefrom.

12. (Currently Amended) The device according to claim 9, wherein the determining means is adapted to determine, in operation, whether the portable electronic device is located within a certain distance from another electronic device, from which the electronic message has been transmitted.

13. (Currently Amended) The device according to claim 9, wherein the electronic message is a notification message.

14. (Currently Amended) The device according to claim 9, wherein the message is an SMS a short message service, an enhanced message service [[EMS]], or a multimedia message service an MMS message.

15. (Currently Amended) A system An electronic communication device for sending forming an electronic message therein, the system comprising:
an electronic device comprising:

input means for entering the electronic message and at least one display conditions set by a transmitting user condition for conditional display displaying of the message to be appended to said electronic message, the conditional display conditions comprising:

a geographical area in which the electronic device should be located when the electronic message is displayed in an external device, and another geographical area in which the external device should be located when the electronic message is displayed in the external device, and and a message interface forming the electronic message, wherein the message interface is adapted to append to the electronic message a geographical display condition, which is intended for a recipient of the message; and the electronic device comprises

transmitting means for transmitting the electronic message to [[an]] the external device, which is [[the]] a recipient of the electronic message;
a service node comprising:

means for storing the electronic message in the service node until the electronic device is within the entered geographical area and the external device is within the entered geographical area, and

means for forwarding the electronic message to the external device when the electronic device is within the entered geographical area and the external device is within the entered geographical area.

16. (Canceled)

17. (Currently Amended) The system device according to claim 15, and wherein the message interface is adapted to incorporate into the geographical display condition information with regard to a certain distance from the electronic communication device the means for entering the display conditions further comprises:

entering a certain distance with regard to the geographical area, within which the external device should be located when the electronic message is displayed.

18. (Currently Amended) The system device according to claim 15, wherein the electronic device is a mobile radio terminal, a pager, [[or]] a personal digital assistant, a communicator, a smartphone, or an electronic organizer.

19. (Currently Amended) The system device according to claim 15, wherein the device is a mobile telephone.

20. (Currently Amended) A software program product embodied on a computer readable medium, comprising computer readable instructions for carrying out [[the]] a method comprising: according to claim 1 when carried out by a processor
receiving in a portable electronic device a message from an external device;
determining in the portable electronic device the geographical position of the portable
electronic device;
determining in the portable electronic device whether the geographical position fulfills a
geographical display condition of the message; and
displaying the message in the portable electronic device if the at least one display
condition is fulfilled.

21. (Currently Amended) A software program product embodied on a computer readable medium, comprising computer readable instructions for carrying out [[the]] a method comprising: according to claim 5 when carried out by a processor
entering, in an electronic device, display conditions set by a transmitting user for
conditional display of a message, the conditional display conditions comprising:
a geographical area in which the electronic device should be located when the
message is displayed in a recipient electronic device, and
another geographical area in which the recipient electronic device should be
located when the message is displayed in the recipient electronic device;
appending said display conditions to said message;
entering a receiver address to which the message should be sent;
sending the message to a service node;

storing the message in the service node until the electronic device is within the entered geographical area and the recipient electronic device is within the entered geographical area; and
forwarding the message to the recipient electronic device when the electronic device is within the entered geographical area and the recipient electronic device is within the entered geographical area.
